

Clarke's®

LOG YARD RESIDUE RECLAIM SYSTEM®

Turn log yard residue into PROFIT!

Clarke's Log Yard Residue Reclaim System was developed specifically for the purpose of recycling log yard residue. It is the most practical, efficient and money-making system for processing this residue.

Front loader fills reclaim hopper with log yard residue.

Recycling log yard rock, and using or selling the wood residue instead of hauling it to a landfill, eliminates two large expenses for the mill owner!

Our incredible Log Yard Residue Reclaim System separates the residue into its basic components of **rock**, **finer** and **bark**, according to the customer's needs.

Reclaimed products are usable on site or have sales potential to specific markets such as the nursery, landscape, and fuel industries.

A savings in reclaimed rock and fuel combined with income from selling other separated products can give the mill owner a

very short payback on his capital investment.

Our Log Yard Residue Reclaim System can process material at a **rate of 150 cubic yards per hour with only two people**. One person operates a front-end loader to fill the reclaim hopper and stack and handle the processed material. The second operator oversees the system and manually sorts the oversized rock and wood.

The Log Yard Residue Reclaim System features the exclusive Clarke's RMS Separators which use 100% recycled air to remove rocks from bark or fuel without releasing pollutants into the air.

For more information on how Clarke's Log Yard Residue Reclaim System can solve your log yard clean-up problems and turn your residue into profit, call us today!

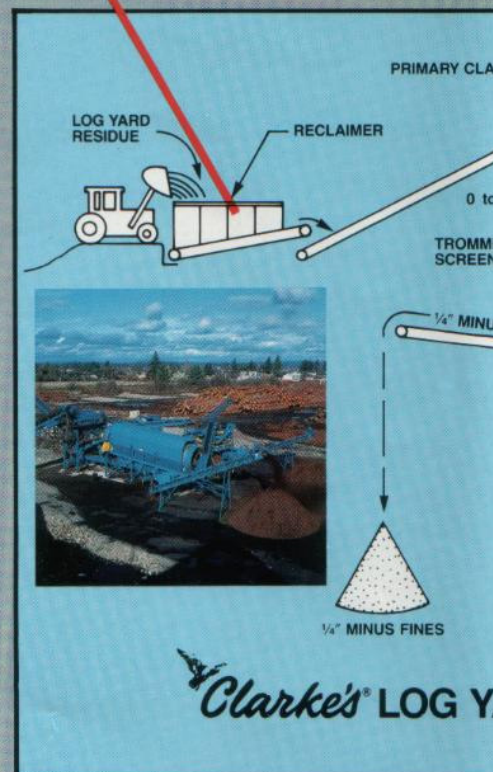

Operator controls all drives from one location.

RECLAIMER

Trouble-free, heavy duty chain bottom reclaimer controls discharge of unprocessed residue.

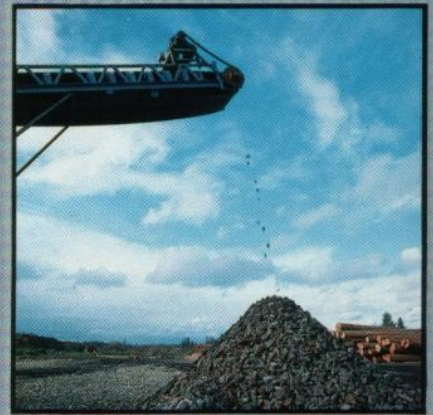

Recycle valuable rock...

ROCK

Clean processed base rock ready to be returned to the log yard.

RMS SEPARATORS

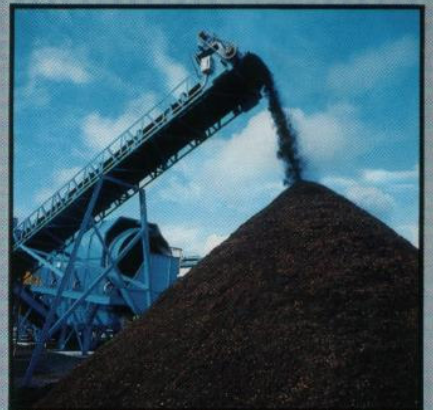

Pneumatically separate rock and bark without discharging pollutants to the atmosphere.

TROMMEL SCREEN

Specially designed trommel screen removes fine dirt and bark.

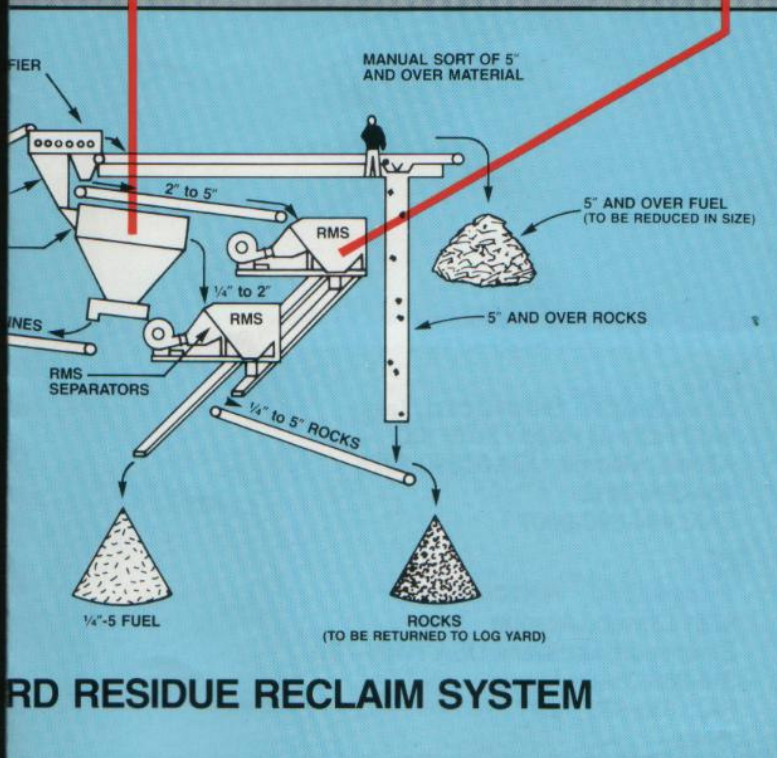

BARK

Clean acceptable bark, ready to be burned as fuel or processed for decorative bark.

FINES

Reclaimed fines become valuable mulch.

Oversized rocks and wood can be discarded or further processed and reclaimed.

Reclaim valuable mulch...
